Solution

Task 1

78% SOURCERS ARE NOT
GOING TO PASS THIS FIRST
LEVEL.

This is a site to which I was transferred when the game started. Generally speaking nothing to interact about. So first thing I did was checking HTML of the site.

```

<!DOCTYPE html>
<html lang="en">
  <head> ... </head>
  <body data-smooth-scroll-offset="77">
    <div class="nav-container"> ... </div>
    <div class="main-container">
      <section class="text-center space--lg">
        <div class="container">
          ::before
        ...
        <div class="row"> == $0
          ::before
          <div class="col-sm-10 col-md-8"> ... </div>
          <!-- <div> If you're reading this you passed the first level. Pass: games42 </div> -->
          ::after
        </div>
        ::after
      </div>
    </section>
  </div>
  <script src="js/jquery-3.1.1.min.js"></script>
  <script src="js/parallax.js"></script>
  <script src="js/smooth-scroll.min.js"></script>
  <script src="js/scripts.js"></script>
</body>
</html>

```

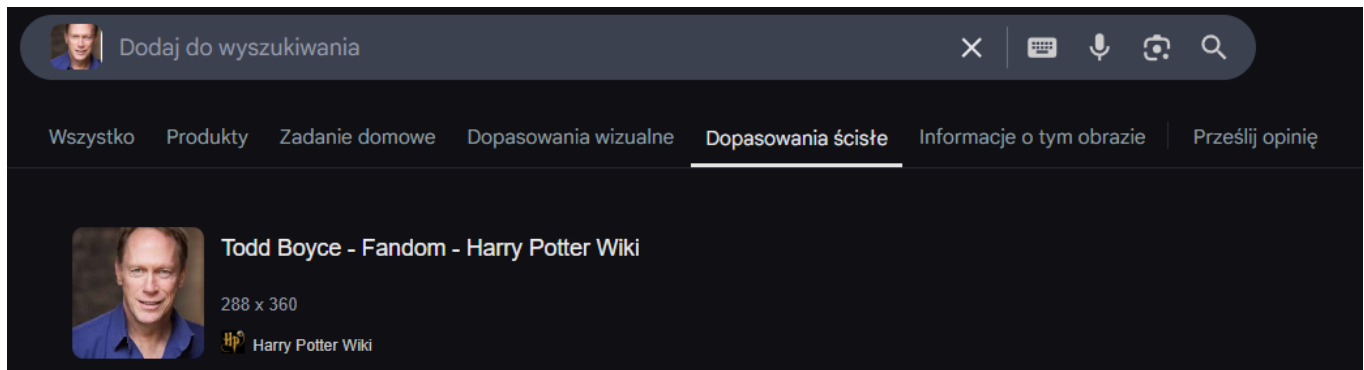

With use of developer tools I managed to find a flag hidden in dev comment.

Task 2

Find who is this person and his name will unlock another level.

This time goal is to find name of a person showed on the picture.

Quick reverse image search and i find out that the name of this person is **Todd Boyce**.

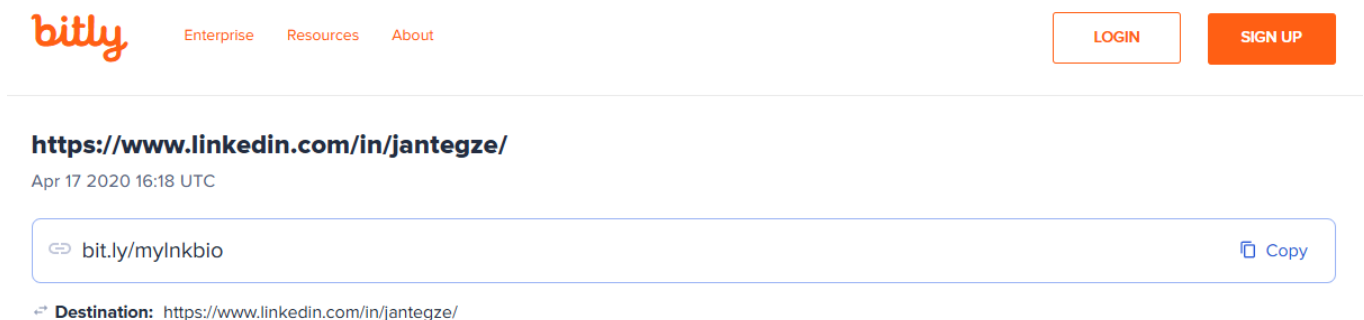

Task 3

Find the date when this URL (shortener) was created.

Password is Month and Day (eg. "jan" and day "1")

`https://bit.ly/mylnkbio`

To find the date of creation of this URL I decided to find look for some online tool which can provide some extra info about bit.ly links.

Luckily bitly provides this type of service by its own and with use of it it was easy to find required information.

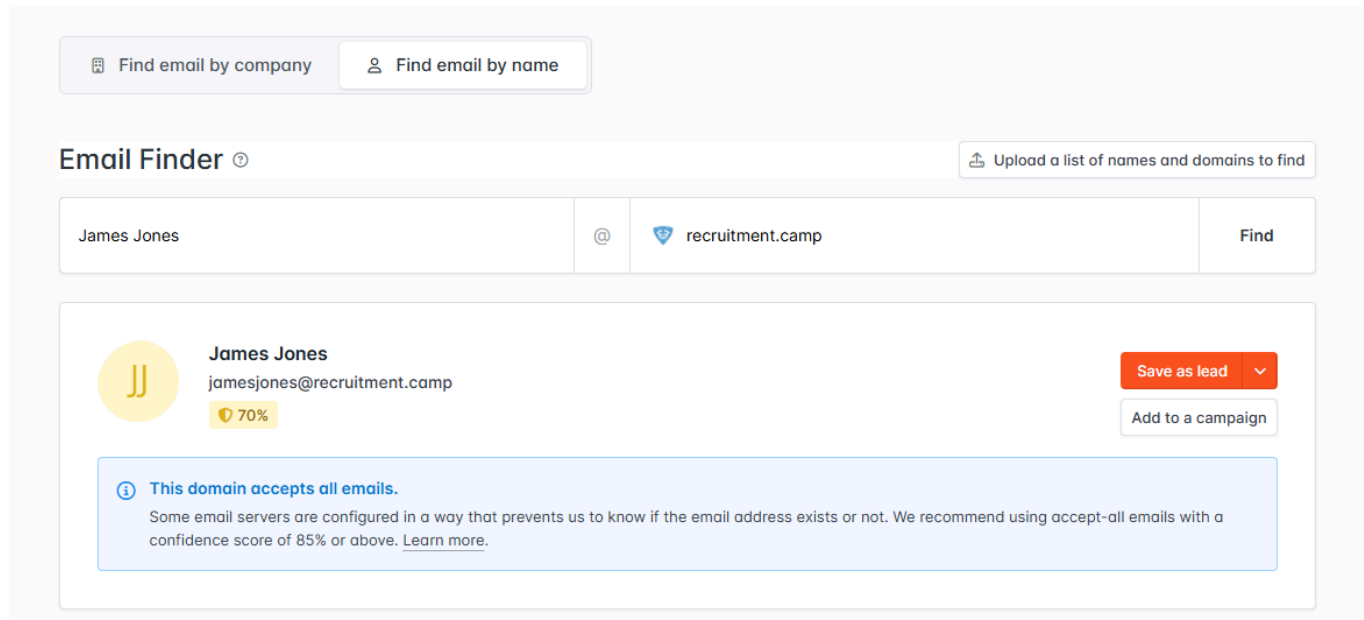

Task 4

I met James Jones a few years ago, and he helped me with some things at recruitment.camp. To speed up our communication, I gave him an email at recruitment.camp. However, I had to learn how to create a professional email address, especially since James didn't want to have a dot in the email address.

His email is the password to the file below (Download file).

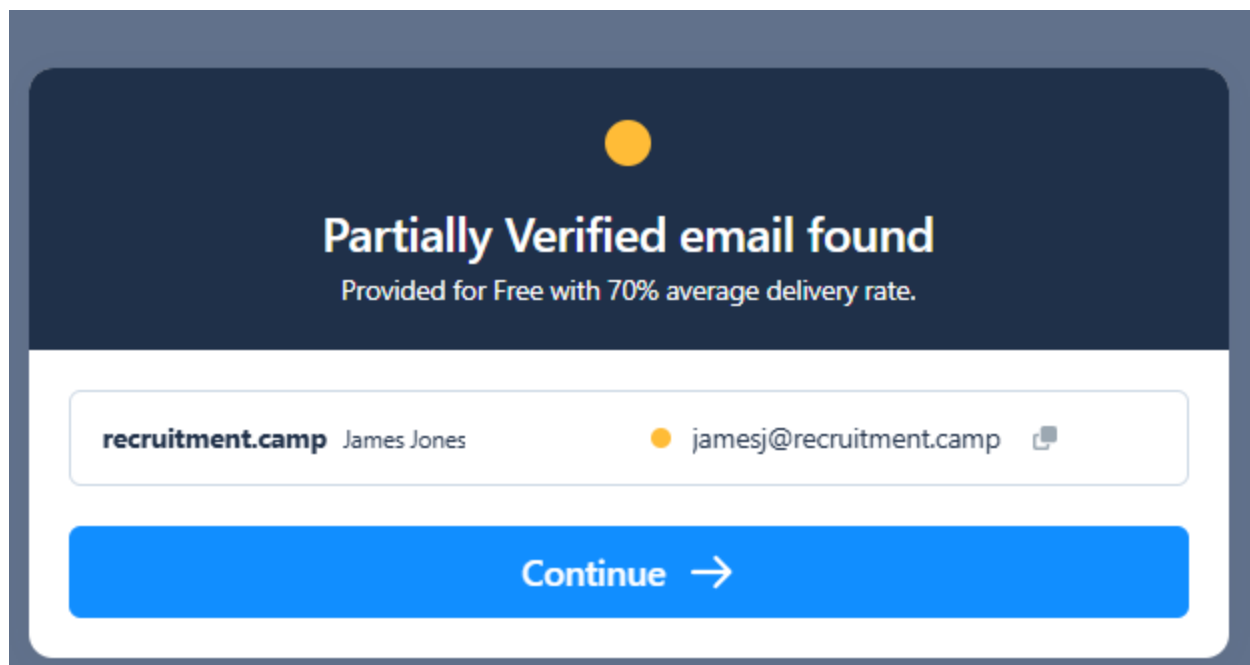

Hint: Don't let bounce, disposable, spam-trap and deactivated emails decrease your sending reputation.

To find this specific email I looked for some email finder tools

The screenshot shows the 'Email Finder' tool interface. At the top, there are two tabs: 'Find email by company' (selected) and 'Find email by name'. Below the tabs, the tool is titled 'Email Finder' with a small icon. To the right of the title is a button that says 'Upload a list of names and domains to find'. The main search area has two input fields: the first contains 'James Jones' and the second contains '@ recruitment.camp'. To the right of these fields is a 'Find' button. Below the search fields, the results for 'James Jones' are displayed. It shows a yellow circular profile picture with the letters 'JJ', the name 'James Jones', the email address 'jamesjones@recruitment.camp', and a '70%' confidence score. To the right of the email address are two buttons: 'Save as lead' and 'Add to a campaign'. Below the email address, there is a blue box with a warning icon and the text: 'This domain accepts all emails. Some email servers are configured in a way that prevents us to know if the email address exists or not. We recommend using accept-all emails with a confidence score of 85% or above. [Learn more.](#)'

I used tool hunter.io and searched for emails by name and company domain but email which I have received was incorrect so i decided to try other tools of this kind

The screenshot shows the Hunter.io tool interface. At the top, there is a dark blue header with a yellow circle and the text 'Partially Verified email found' and 'Provided for Free with 70% average delivery rate.' Below the header, there is a search bar with the text 'recruitment.camp James Jones' and a yellow circle next to the email address 'jamesj@recruitment.camp'. To the right of the email address is a small icon of a document. Below the search bar is a large blue button with the text 'Continue' and a right-pointing arrow.

Luckily with this tool (<https://anymailfinder.com>) I did get correct answer to this task.

Task 5

Finding the name was easier than I thought. Only thing which I had to do was checking his github profile.

Task 6

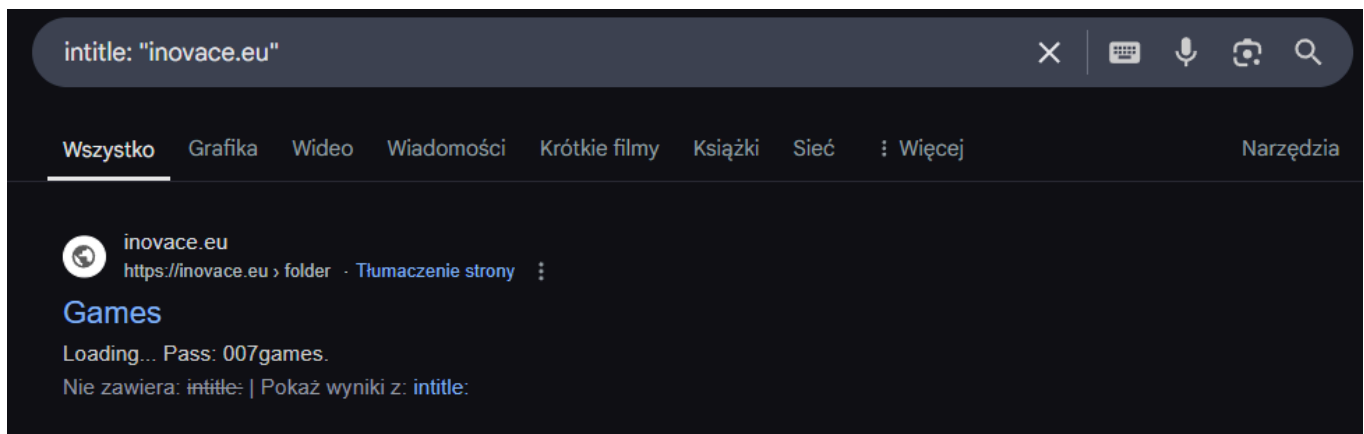

One folder of this website “inovace.eu” was indexed by Google.

You can find there the password for the next level.

Instructions

Use the password from the site

To find information of this sort I decided to do some basic Google Dorking.

With the use of **intitle** attribute and given domain it was fairly easy to find a password

THE END

GAME 1 - END

CONGRATULATIONS!

You just finished first Sourcing Game!
