Start date: 17.05.2025

End date: 17.05.2025

Solution

Task 1

Get the password from the URL below.

OPEN URL

This is the URL <https://www.sourcing.%20games/games/02s/> from which I have to get the password. The first thing that I noticed was the unusual "%20" in the URL so I checked what it means and found out that "%20" in HTML URL encoding represents "space". But as far as I know, spaces aren't allowed in the URL so I decided to try out the URL without "%20" and with this approach, I was able to get the password.

Task 2

I can't travel back in time, but in October 26, 1996 on microsoft.com, I saw the name of the guy who became a certified trainer.

His name stuck in my mind, and that's why this surname is the password for the next URL.

Firstly, I tried to do a Google search with the attribute "intitle" set to "microsoft.com" and the date range set to match only results from October 26, 1996 but this method didn't work out. So I checked the internet archive and found exactly one capture of microsoft.com on October 26, 1996.

Task 3

LinkedIn disallows all robots to index some things, and these robots already know that your "keyword for next level" is a part of the e-mail address before @linkedin.com.

To complete this task, firstly I checked "robots.txt" of LinkedIn, then I looked for "@" to find any email mentions on the site.

```
# Notice: If you would like to crawl LinkedIn,  
# please email whitelist-crawl@linkedin.com to apply  
# for white listing.
```

Task 4

The first part of the e-mail address of this GitHub user is the password that will open the file below. (Use only the part before @)
The password that is in that file will open the next level.

To find e-mail of GitHub user "angularjs-gditi" I entered one of the user's commits and added ".patch" to URL.

```
From 4243528ac995e2bb717eed82b06fea620ab7f0f2 Mon Sep 17 00:00:00 2001  
From: unknown <pt103368@PT103368.corp.int>  
Date: Sat, 30 Apr 2016 19:58:20 -0700  
Subject: [PATCH] init
```

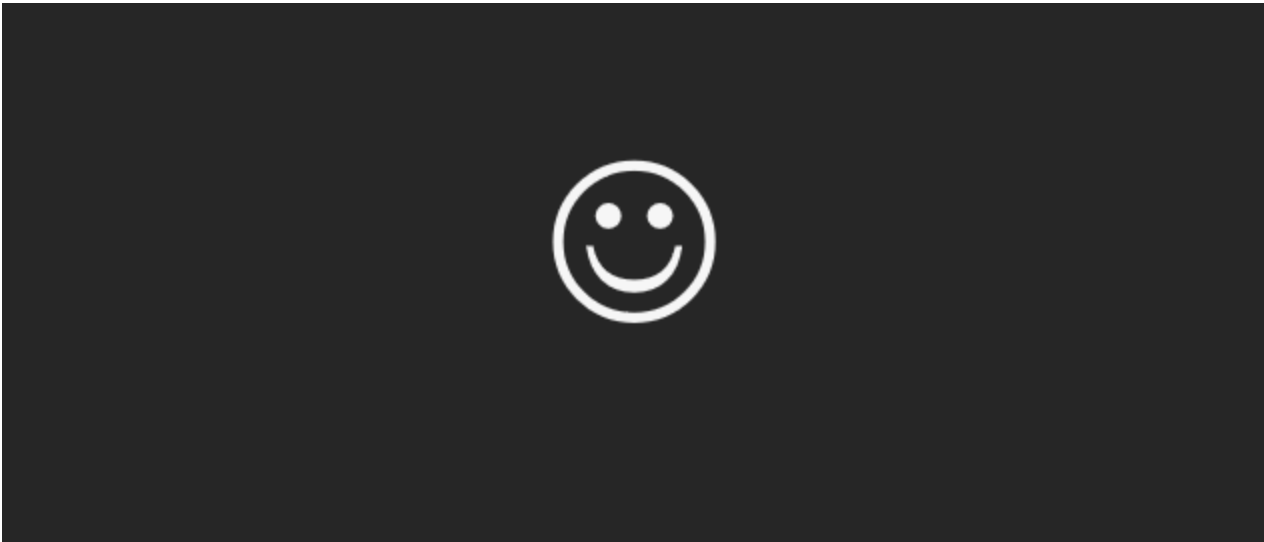

Task 5

In 2016, I met a great guy, who worked as a Developer in Poland, not sure if he was from Warsaw, Wroclaw or Crakow. But what I remember was that he is a developer (intermediate level), working with Angular, Java, JUnit and Python.

When he told me his name I thought that he was a foreigner, but he doesn't speak a word in English, only Polish.
I also found his LinkedIn profile, I hope he will learn English and I wish I was fluent in Polish.

As for this task, I had to find the name of the Polish developer described above. To do this, I simply searched for "LinkedIn intermediate developer Polska Angular, Java, JUnit and Python" and found the profile of Petr Davis, who matched the description.

Task 6

In the last task of this game, I had to find a password hidden in a file. The first thing I decided to do was check the metadata of the file with the use of some online tools.

titles_of_parts	
company	42sourcer
links_up_to_date	No
characters_with_spaces	1
shared_doc	No
hyperlinks_changed	No
app_version	16
title	Interesting, right? :)
subject	
creator	@jantegze; #SourcingGames

From all the metadata, "company" looked the most password-like, so I decided to check if it was correct, and it was.

THE END

GAME 2 - END

CONGRATULATIONS!

You just finished second Sourcing Game!
