Start date: 18.05.2025

End date: 18.05.2025

Solution

Task 1

Get the password from the URL below.

OPEN URL

The first task was to get the password from the URL, the content of the page is shown below, and the URL itself is "<https://g3.inovace.eu/start.html>".

EVERY NOW AND THEN FOLDERS WILL SHOW THE FILES YOU ARE LOOKING FOR.

PROTECTION IS IMPORTANT!

The hint on the site explained everything to me and the first thing I did was to change the URL to "<https://g3.inovace.eu/>".

Index of /

Name	Last modified	Size	Description
 resume.docx	2021-03-24 18:40	24K	
 resume.pdf	2021-03-24 18:40	156K	
 start.html	2021-03-24 18:40	5.6K	

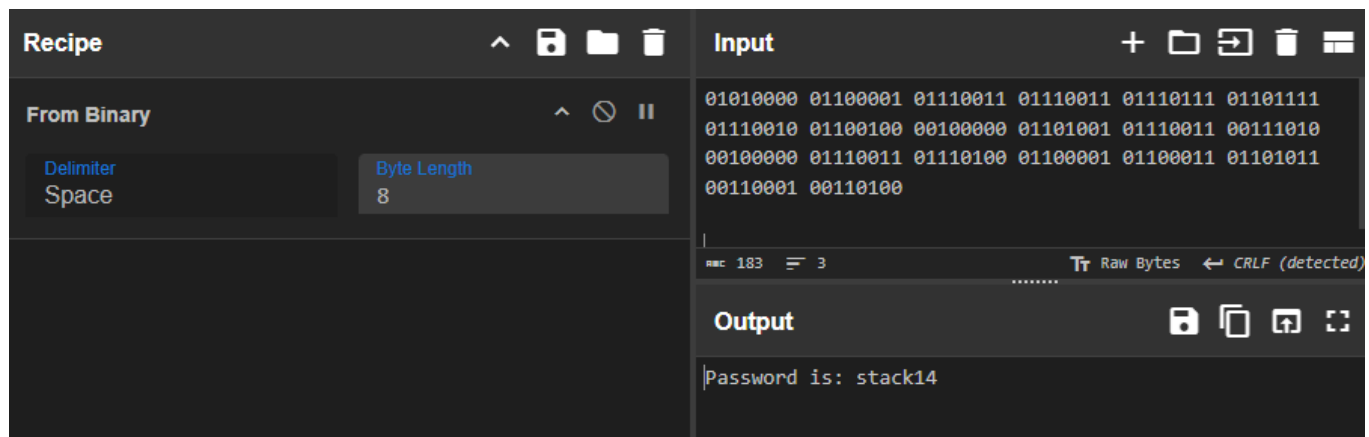

As a result I found the resume.pdf file that contained the password.

Task 2

Sometimes, you need to decode messages that people are sharing on their profile.
Because you can use that info in the message that you are going to send them.

```
01010000 01100001 01110011 01110011 01110111 01101111 01110010 01100100 00100000 01101001 01110011 00111010  
00100000 01110011 01110100 01100001 01100011 01101011 00110001 00110100
```

Another simple task of translating a message from binary format.

The screenshot shows the CyberChef web interface. On the left, under the 'Recipe' tab, the 'From Binary' section is active. The 'Delimiter' is set to 'Space' and the 'Byte Length' is set to '8'. On the right, the 'Input' section contains the same binary string as in the previous block. Below the input, the 'Output' section displays the result: 'Password is: stack14'. The interface also shows a 'Raw Bytes' view and a 'CRLF (detected)' status.

To find the password, all I had to do was use a very powerful tool called CyberChef and convert the binary data into plain text.

Task 3

Finding some answers is easy; for instance, the name of the highest reputation holder on [Stackoverflow](#).

The company name where this person worked in 2020 is your password for the next level.

The first step to accomplish this task was to find a user, which was easy because Stackoverflow has a kind of user leaderboard showing how much reputation the top

users have.

The screenshot shows the 'Users' page on Stack Overflow. On the left is a sidebar with navigation links: Home, Questions, Tags, Discussions (with a 'Labs' sub-link), Chat, Articles, Users (highlighted), and Companies. The main content area is titled 'Users' and has a search bar 'Filter by user'. Below the search bar are tabs for 'Reputation', 'New users', 'Voters', 'Editors', and 'Moderators'. At the top right, there are time range filters: 'week', 'month', 'quarter', 'year', and 'all' (selected). The main area displays a grid of user profiles. The first profile is Jon Skeet, with a reputation of 1.5m, 890 answers, and 9.3k questions. Other visible profiles include VonC, Gordon Linoff, Martijn Pieters, BalusC, T.J. Crowder, Marc Gravell, and Darin Dimitrov, each with their respective reputation, answer, and question counts.

This is how I found out that Jon Skeet was at the top of this ranking at that time.

The screenshot shows Jon Skeet's profile on Stack Overflow. The profile header includes his avatar (a cartoon character), his name 'Jon Skeet', and his status as a 'Member for 16 years, 7 months' who was 'Last seen this week'. It also shows his location as 'Reading, United Kingdom' and his website 'csharpindepth.com'. Below the header are tabs for 'Profile' (selected) and 'Activity'. The 'Stats' section shows: 1,509,711 reputation, 421.1m reached, 35,779 answers, 56 questions, and a '#1 overall' badge. The 'About' section identifies him as the 'Author of C# in Depth', mentions he is 'Currently a software engineer at Google, working remotely but near London', and notes he is 'Usually a Microsoft MVP (C#, 2003-2010, 2011-)'. Under 'Sites / social:', it lists Mastodon (@jonskeet@hachyderm.io), C# in Depth, Coding blog, C# articles, Bluesky (@jonskeet.uk), and Twitter (@jonskeet). A 'Collectives' section shows he is a 'Google Cloud 2021 • Member'. A 'Read more' button is at the bottom right.

Fortunately, I learned from his profile on Stackoverflow that he worked at Google from 2011 until now.

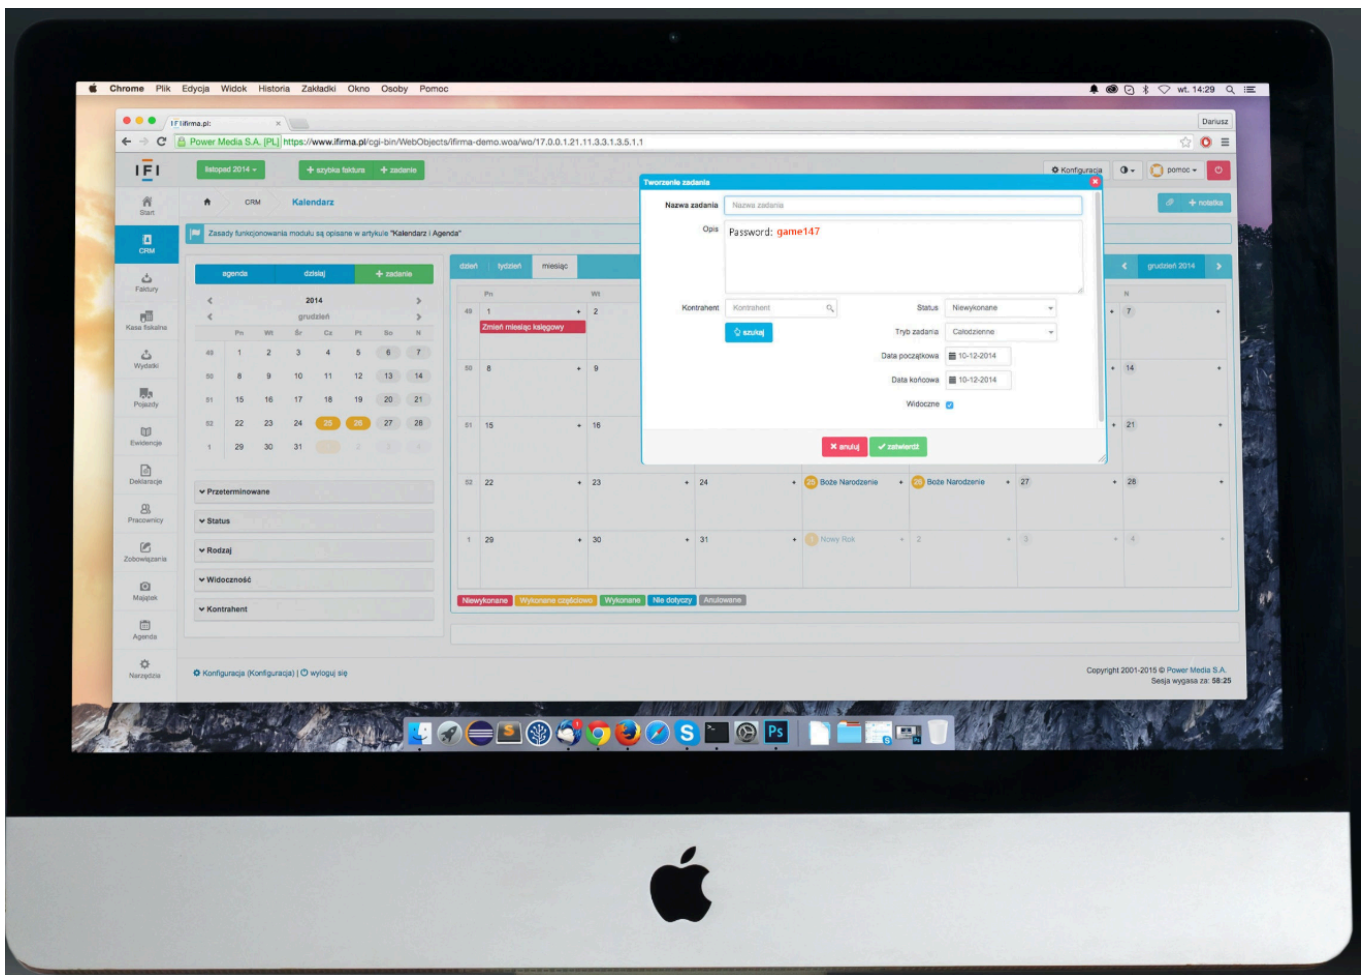

Task 4

DEVILS ARE IN THE DETAILS

OFFICE DESK PICTURES ON LINKEDIN ARE SOMETIMES, A GREAT SOURCE OF INFORMATION.

The next task was to get the password from the URL shown above.

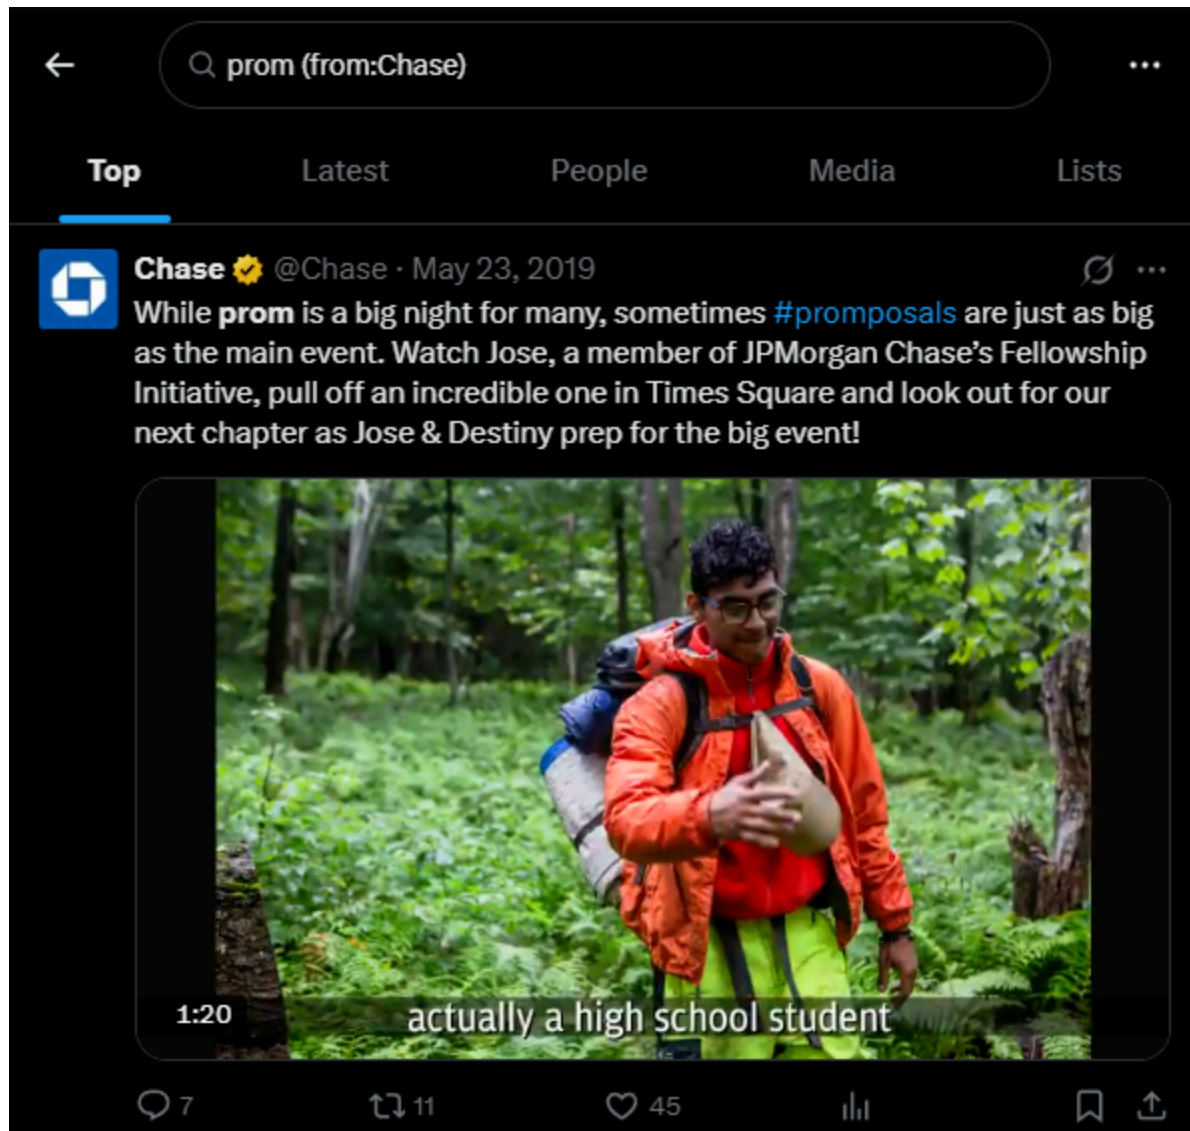

The hint given by the author of this task made it clear that the password is linked to the image on the page, so I opened it fully in another tab and that was enough to find the password.

Task 5

Sometime in May 2019, José invited someone to prom, and Chase covered this story.

What was the name of the person that José invited?

This time task was to find information about a certain event covered by Chase on their X account (<https://x.com/Chase>).

To find this information, I used an advanced search on X to find all posts with "prom" made by @Chase account.

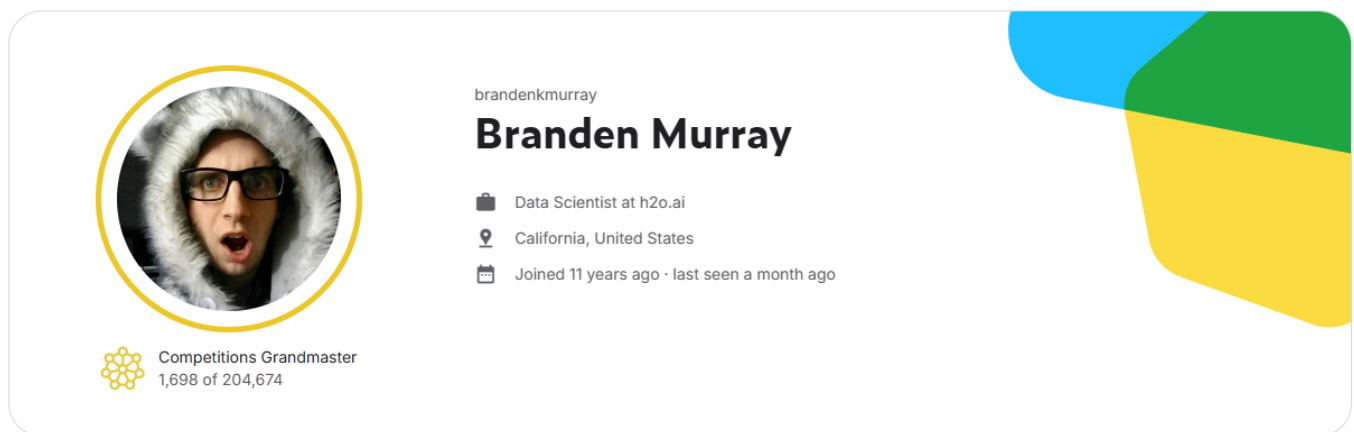

Task 6

Meeting new people is always great because you will learn a lot about them and also from them.

My friend met a guy in California who is working there as a data scientist, and he told him that he is a discussion master on the site that has something to do with "Your Home for Data Science."

He remembered his profile photo on his page on that website (not LinkedIn), where he was wearing glasses and a funny winter hat.
What is his username on LinkedIn?

To complete this task, I first had to find out to which site had something to do with "Your Home for Data Science", so I simply searched for this quote and found out that the guy met in California must be a discussion master at "<https://www.kaggle.com>".

With the knowledge gathered so far, I decided to simply google "kaggle discussion master" and among several other profiles, I found the one belonging to Branden Murray whose photo matched the description given in the task. The username found on Kaggle fortunately matches his LinkedIn username.

THE END

GAME 3 - END

CONGRATULATIONS!

You just finished third Sourcing Game!
